History AutoCAD was the first CAD program to use a graphical user interface, and was the first to create work in architectural form, not only for design professionals but also as a teaching tool for architects. In addition to the original AutoCAD, there are two other versions, AutoCAD LT and AutoCAD Architecture. Both offer the same features, but the architecture version is focused on 2D drawings and modeling while the lite version is for more simple drawings. Features AutoCAD is a completely integrated drawing and modeling tool. In AutoCAD 2003, the 2D crosshairs are replaced with a cross hair bar. The AutoCAD's crosshair was implemented in 1990 as a dot on the mouse cursor, until its replacement by a crosshair bar. All of these AutoCAD features are available to users when AutoCAD is installed, with the exception of the drawing exchange format, which requires the AutoCAD 2002R or later product. In AutoCAD 2002R, the crosshair bar, crosshairs, and crosshair options are no longer available. The AutoCAD 2002R crosshair bar is the same as the 2002 crosshair bar, but it now displays the number of drawings that have been imported or exported since the last use. Saving a drawing to the drawing exchange format is disabled in AutoCAD R13. Crosshair configurations The following table describes the available options for the crosshair bar: AutoCAD 2004R introduced a new user interface. The crosshair bars appeared by default in the design area, instead of the deprecated 2D crosshairs. AutoCAD 2004R also included a new crosshair bar manager, accessible by pressing Ctrl+T. In this interface, the crosshair bars can be selected and dragged, and the crosshair bar manager also provides information about where the bar is currently located. There is also an option to change the crosshair type and size. The crosshair options are also accessible by the crosshair option on the crosshair bar manager. In AutoCAD LT 2007R, crosshairs and crosshair options are unavailable. Instead, "standard" and "new" crosshairs are available. The "new" crosshairs also have a close option in the option bar, which is not available in AutoCAD LT 2007. AutoCAD LT 2007 includes a crosshair "handle" that is placed in the center of the crosshairs. AutoCAD 2013R introduced a new user interface. The crosshair bars are available by default in the design area. When opening a drawing, the crosshair bars are accessible by clicking the button above the drawing area. A drawing's crosshair bar settings are accessible by pressing Ctrl+T. In AutoCAD 2015R, crosshair bars are available only in the 3D design area. Drawing extensions In addition to the user interface enhancements, AutoCAD 2004R introduced two new drawing extensions. Using the Adobe Ac af5dca3d97
