In this article, we will take a look at the new features in AutoCAD 2014 that are currently available. Arc on Arc Let's take a quick look at how to draw a segment on a segment, what is arc on arc. In a typical CAD drafting software application, you have to draw a rectangle and then draw an arc and then a line. You have to then add a dimension. This will make the drawing bigger and will also make it difficult to change the value of the dimension. You can't just drag one element and change its value. The arc on arc tool is exactly for this use. In the figure below, you can see I have a rectangle, then I draw an arc on arc, and then a line. You can see that I have a dimension value of 5 inches on the right side. This shows that this segment is 5 inches long. In AutoCAD 2014, we have introduced an arc on arc tool. You can easily draw arcs and arcs on arcs. With this feature, you can easily create a segment that is either a rectangle, circle, ellipse or a segment on arc. You can even change the segment width or height. You can easily choose whether you want to use inches, millimeters, or feet. You can also change the value of the segment. In the figure below, I have drawn a segment on arc, then a rectangle, then an arc

The Cursor Selection box tool allows users to select any shape or feature of a drawing. The "Select All" command allows users to select every object on the drawing. AutoCAD offers multiple ways of navigating (viewing) drawings: Zoom: Allows the user to zoom in and out of the drawing. Pan and zoom: The user is able to pan and zoom the viewport. Locking the viewport: The user is able to lock the viewport so that it does not move with the mouse, providing a more stable view of the drawings. Alternate drawing views: Viewing the drawings in multiple orientations (portrait, landscape, etc.) Viewing objects in full-screen mode: The objects displayed on the screen are maximized, so that the screen can be viewed with multiple objects visible at one time. Multiple applications can be opened simultaneously, which allows the user to interact with the drawings with one application while viewing the others. User interface customizations: AutoCAD provides several user interface customization options, such as (1) the available colour palette, (2) the presence or absence of line numbers, (3) zoom level and (4) viewport switching via the zoom-out tool. User-defined named toolbars and custom-made toolbars. The custom-made toolbars allows users to add custom menus to the toolbars on the interface. Several commands to improve the efficiency and workflow of the user. For instance, the command Ctrl+0 is the shortcut to turn off the status bar. User-defined shortcut keys. These shortcuts are useful for specific uses, such as turning on/off an option, hiding or showing a user-defined toolbar, and many more. SpeedText™: Users can draw freehand text (letters, numbers, symbols, and so on) within AutoCAD.
